Exp. No. 6

SALARY STATEMENT USING CLASS AND OBJECT

AIM: Program to implement a salalary statement using class and object.

PROGRAM

#define class

```
class Salary:
   def _init_(self, name, basic):
      self.name = name
      self.basic = basic

   def calculate(self):
      self.da = self.basic * 0.20
      self.hra = self.basic * 0.10
      self.pf = self.basic * 0.05
      self.net_salary = self.basic + self.da + self.hra - self.pf

   def display(self):
      print("\n------ Salary Statement ------")
      print("Employee Name :", self.name)
      print("Basic Salary  :", self.basic)
      print("DA (20%)      :", self.da)
      print("HRA (10%)     :", self.hra)
      print("PF (5%)       :", self.pf)
      print("Net Salary    :", self.net_salary)
#input data
name = input("Enter employee name: ")
basic = float(input("Enter basic salary: "))
# creating object
s = Salary(name, basic)

s.calculate()
s.display()
```

RESULT:

Program is executed successfully and output is obtained.

OUTPUT

```
Enter employee name: Rahim

Enter basic salary: 20000

------ Salary Statement ------
Employee Name : Rahim
Basic Salary  : 20000
DA (20%)      : 4000
HRA (10%)     : 2000
PF (5%)       : 1000
Net Salary    : 25000
```

Exp. No. 7

FILE OPERATION IN PYTHON

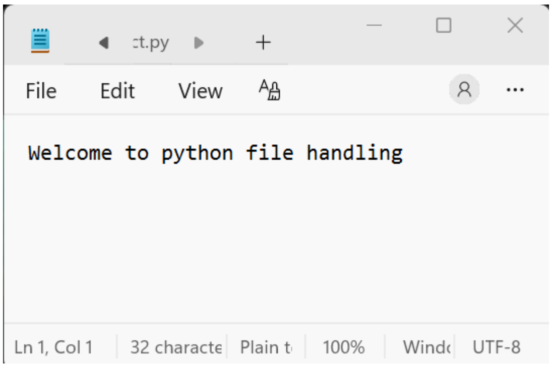
AIM: Write separate programs to perform file operations (write, append and read).

PROGRAM - 1

```
#Writing to a File
file = open("sample.txt", "w") #”w” means read mode
file.write("Welcome to python file handling ")
file.close()

#Read the file
file=open("sample.txt","r")  #”r” means read mode
cont=file.read()
print(cont)
```

OUTPUT



PROGRAM – 2

```
#Append to a File
file = open("sample.txt", "a") #”a” means append mode
file.write("\nAppend: SSM POLYTECHNIC COLLEGE TIRUR ")
file.close()

#Read the file
file=open("sample.txt","r")  #”r” means read mode
cont=file.read()
print(cont)
```

RESULT:

Program is executed successfully and output is obtained.
